MEDICS

Our safe, comfortable, well-lit modules are designed from the ground up to give you a space where you can focus on what matters most, your patient.

THE CHALLENGE

As a medic, your ambulance is your office. The last thing you should be worried about is the safety and comfort of that space. We know very well the functional limitations many of our competitors build into their vehicles. The cramped, poorly-lit, hot environment they provide simply adds to the stress you're already under as you care for the life of another human being.

You shouldn't have to worry about your ambulance. It should help you improve your ability to provide care. And you shouldn't have to pay extra for safety and comfort.

EFFICIENT INTERIOR LAYOUTS KEEP EQUIPMENT WITHIN ARMS REACH

THE SOLUTION

Frazer designs with you, the Medic, in mind. Our customers tell us their challenges. We go to work engineering solutions.

Our spacious interior allows six medics to comfortably work on a patient at one time. Ultra-durable, all-aluminum cabinets are strategically positioned within the module to allow for easy access while seated and safe. Our air conditioning system, unsurpassed in the industry, does away with the days of “drip air” and keeps your office ice cold whether out in the field or back at the station. Expansive aisle width allows for patient coverage on all sides without being cramped and smashed. All LED interior dome lighting gives you extreme visibility, and, coupled with our bright white interior surfaces, makes our modules feel like the mobile ERs they’re meant to be. Along with our incredibly strong frame construction, designed to meet the most stringent safety requirements, these are ALL standard features.

ULTRA-BRIGHT INTERIORS

All Frazer units come with powerful all LED interior lighting, resulting in one of the brightest & safest work environments around.

CASE STUDY

A Rural Texas EMS department with a 1000 square mile service area needed a unique solution featuring sufficient space for the extra gear required to support the wide range of call types they encountered. Additionally they needed to keep the medics cool during extreme summer heat and long transports. They found the overall storage in their previous units insufficient for extrication tools, ultrasound monitors and other critical equipment. They needed air conditioning to withstand the Texas heat. Mostly they needed someone to customize the vehicle and stay within budget.

Frazer built and delivered a custom Type I 14' generator-powered module on a RAM 4500 series diesel chassis in October 2016. Our unique door-forward configuration allows ample space for all their equipment needs and call types, our ice-cold air conditioning keeps the medics comfortable, and it all stayed within budget. According to a medic with the service, "Frazer has the best A/C on the market!"

Rural EMS is subject to extreme variation in call types. By working closely with the customer, Frazer provided a unique solution that not only allowed for storage of all critical gear but also ensured medics were cool and comfortable in high heat and long transport scenarios. With Frazer's legendary durability and reduced service times Medics stay in their Frazer. As this customer states, "No one likes getting in a backup."

Adjustable Shelving

Inside / Outside Compartments

TONS OF STORAGE

As a medic, you never want to worry about not having enough storage.

This is why every Frazer unit comes loaded with abundant storage options that are designed to handle all of your life saving gear.

**ULTRA-COOL
AIR CONDITIONER**

**LOADED WITH
SAFETY FEATURES**

**EASY TO CLEAN
& MAINTAIN**

IF YOU CAN DREAM IT... WE CAN BUILD IT!

We specialize in Emergency Medical Service vehicles suitable for licensing and use as Mobile Clinics, Mobile Stroke Units and Ambulances.

“ Our winter put to rest any concerns regarding staying warm in a Frazer. And the A/C unit in the summer rocks! We have been between 95° and 100° many days and I take a coat if I'm riding with a patient. Good job and thanks for leading us in the right direction. ”

*Joe Keena, Firefighter / EMT
