Approval Pro Tips

- Assign a primary point of contact for communication & approvals.
- Gather logos, patches, and design files in vector format (.AI, .EPS, .SVG).
- Send feedback in batches—clear, honest, and prompt responses help keep things moving.
- Share your ideas early—we'll make sure everything looks sharp and meets compliance.

Graphics Quickstart

**Precision in Every Line.
Purpose in Every Detail.**

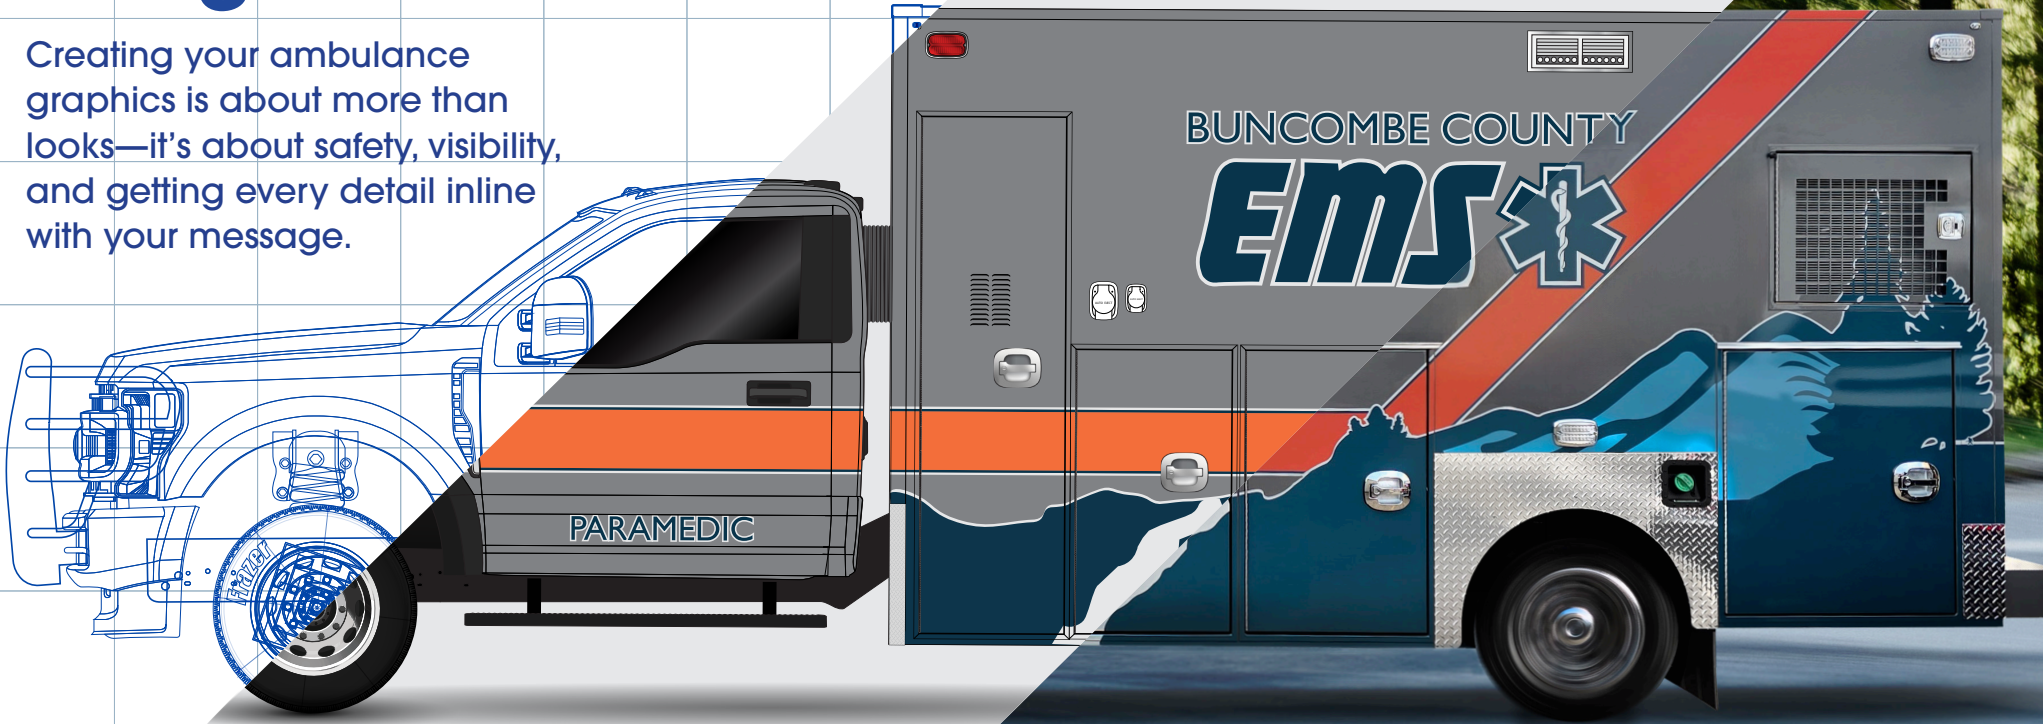

Frazer™

Defining the Future of Mobile Healthcare.™

Design Process

Creating your ambulance graphics is about more than looks—it's about safety, visibility, and getting every detail inline with your message.

Week 1

1 Creative Intake

30 days before your artwork is due, we'll reach out to introduce your designer and begin the conversation.

We'll ask for your logo files, design ideas, and any special requests. The more detail you share, the better.

FAQs, Templates, and Compliance Materials

Week 2 to 4

2 Review & Refine

You'll receive a digital proof for review. Just send your feedback, and we'll revise the proof accordingly and send an updated version for your review.

To keep the process smooth and efficient, we recommend grouping your feedback into batches whenever possible. This allows our team to focus on implementing your requests all at once, helping us make more meaningful progress on your project.

Week 5

3 Final Approval

Once the design is finalized, we'll send an approval PDF for each unit. It is imperative you check all details.

Please, review artwork carefully. Your signature is your approval.

After signing, the artwork is locked and sent to production. Customer initiated changes after approval will incur change order fees and possible delays in unit production.
